

Obey all danger and warning signs

STAY AWAY FROM ELECTRICAL EQUIPMENT

Student name:

Grade:

Teacher name:

Water and electricity are a dangerous mix

Water is a dangerous conductor of electricity. You should always keep any items that are electrically-powered far away from all sources of water.

Can you spot the hidden danger in the picture below?

The radio is plugged in and is too close to the water. If an electrically-powered item comes into contact with water, the water will act as a conductor of the electrical current running through the radio, which could cause a fire, or even serious harm to anyone coming into contact with it.

Never pull a plug out by its cord

Put a big **X** through the wrong way to unplug an electrical cord.
