For Immediate Release October 31, 2018

Alectra Utilities investing $1,000,000 to enhance system reliability in Mississauga

Mississauga, ON – Alectra Utilities is investing $1,000,000 to rebuild overhead infrastructure as part of the company's continuous efforts to enhance system reliability in Mississauga.

The three-phase project consists of rebuilding overhead poles along Derry Road between Winston Churchill Boulevard and Millcreek Drive. The investment is part of an infrastructure upgrade commitment undertaken by the utility that includes 27 pole rebuilds and replacing 7,360 metres of overhead conductor cable. The first phase was completed last year, and the second and third phases of the project are currently underway with an expected completion date in late November.

Several assets throughout Alectra Utilities' system in Mississauga are facing significant pressures due to increased customer demand and a growing number of system components that require replacement. Alectra Utilities allocated a significant budget for capital improvements in 2018, including system renewal efforts.

Alectra Utilities is continuously investing in electrical infrastructure while supporting growth and providing safe, reliable and sustainable power for customers in the communities served by the utility. Learn more at alectrautilities.com.
